

MAG-DRO®

MAGNETIC CALIPER BASE

PLANER ADJUSTMENT

REQUIRED

- MAG-DRO's magnetic Caliper Base
- Six-inch calipers (digital)

1. Determine the distance that the planer bed should be raised (do not raise bed more than is recommended in the planer manual).
2. Attach the caliper with Caliper Base to the face of the steel planer (if the planer surface is not steel, a steel plate can be attached securely to the planer).
3. Lower the depth probe to touch the bed surface and set the calipers zero. Watching the readout on the caliper, raise the bed the appropriate amount.
